什么是 GitHub Copilot Extensions

- GitHub Copilot 的一种扩展能力
- 可以使用 Copilot 的 AI 能力
- 无缝与 Copilot Chat 集成
- 支持多平台
- 允许与第三方集成
- 支持自定义配置等

Build and deploy with the tools you love in Copilot Chat

Explore extensions >

Build an extension >

Copilot Extensions integrate your external dev tools
into Copilot Chat. All you need is an API.

Copilot Extensions

Extend Copilot capabilities using third party tools, services, and data

Filter: All

By: All creators

Sort: Popularity

Docker for GitHub Copilot

Copilot

Learn about containerization, generate Docker assets and analyze project vulnerabilities in GitHub Copilot

PerplexityAI

Copilot

Perplexity answers questions as you code by searching the web

Stack Overflow

Copilot

Get answers to your most complex coding questions right where you're already working

Models (GitHub)

Copilot

Copilot Extension to connect and chat with GitHub Models

Mermaid Chart

Copilot

Provides advanced and powerful diagramming and visualization to GitHub Copilot Chat

GitBook for GitHub Copilot

Copilot

Leverage your GitBook documentation to answer questions, providing instant responses in your workflow

ReadMe API

Copilot

Ask questions about the ReadMe API and get help with code, directly in VS code

Product Science

Copilot

Get help with performance optimization techniques to make your code faster

Sentry for GitHub Copilot

Copilot

The Sentry Copilot Extension allows developers to fix broken code from the GitHub UI

Octopus for GitHub Copilot

Copilot

The Octopus extension allows a cloud hosted Octopus instance to be queried via the GitHub Copilot chat interface

Teams Toolkit

Copilot

Chat with GitHub Copilot extension for Teams Toolkit to build Teams apps or customize and extend Microsoft 365 Copilot

DataStax

Copilot

Chat with your data! Write queries and code with natural language

Agentic Search Ai

Copilot

This extension leverages the power of agentic systems to enhance your coding experience. Agentic systems are intelligent ent

LambdaTest

Copilot

Design, implement and analyze test automation right where you code

[@perplexityai](#) Tell me three of the latest AI news.

Here are three of the latest AI news updates:

- **OpenAI's Operator AI Assistant:** OpenAI has launched "Operator," a new AI assistant designed to handle various online tasks such as ordering groceries and processing ticket purchases. Initially available to ChatGPT Pro users, Operator functions as a semi-autonomous agent, emphasizing user safety by restricting access to harmful websites.
- **Adobe's AI-Powered Video Generation Tools:** Adobe has introduced AI video generation tools through its Firefly application, allowing users to create short videos using text prompts. This move positions Adobe in competition with other AI video tools from companies like OpenAI.
- **Elon Musk's Grok 3 AI Chatbot:** Elon Musk has announced the upcoming release of Grok 3, an AI chatbot from his startup xAI. Musk claims that Grok 3 surpasses existing AI chatbots, including OpenAI's ChatGPT, with advanced reasoning capabilities. The chatbot is expected to be released by the end of March 2025.

@models use deepseek, what's your name

<think> Hi! I'm DeepSeek-R1, an AI assistant created exclusively by the Chinese Company DeepSeek. I'll do my best to help you. Feel free to ask me anything. :) </think>

Hi! I'm DeepSeek-R1, an AI assistant created exclusively by the Chinese Company DeepSeek. I'll do my best to help you. Feel free to ask me anything. :)

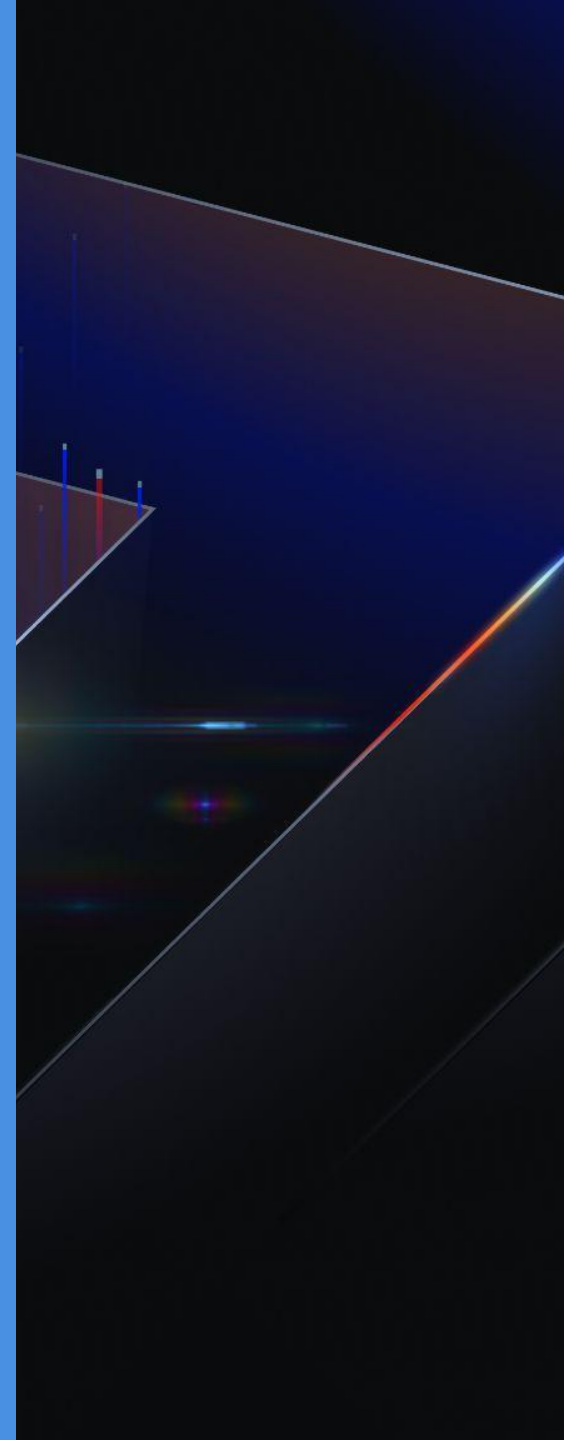

```
app.post("/", express.json(), async (req, res) => {
  // Identify the user, using the GitHub API token provided in the request headers.
  const tokenForUser = req.get("X-GitHub-Token");
  const octokit = new Octokit({ auth: tokenForUser });
  const user = await octokit.request("GET /user");
  console.log("User:", user.data.login);

  // Parse the request payload and log it.
  const payload = req.body;
  console.log("Payload:", payload);

  // Insert a special pirate-y system message in our message list.
  const messages = payload.messages;
  messages.unshift({
    role: "system",
    content: "You are a helpful assistant that replies to user messages as if you were the Blackbeard Pirate."
  });
  messages.unshift({
    role: "system",
    content: `Start every response with the user's name, which is @${user.data.login}`
  });

  // Use Copilot's LLM to generate a response to the user's messages, with
  // our extra system messages attached.
  const copilotLLMResponse = await fetch(
    "https://api.githubcopilot.com/chat/completions",
    {
      method: "POST",
      headers: {
        authorization: `Bearer ${tokenForUser}`,
        "content-type": "application/json",
      },
      body: JSON.stringify({
        messages,
        stream: true,
      })
    }
  );

  // Stream the response straight back to the user.
  Readable.from(copilotLLMResponse.body).pipe(res);
})
```

GitHub Copilot for Azure Preview
